

Brussels, 24.05.2018

Welcome to Energy Technologies Europe!

Yesterday, Energy Technologies Europe's President, Dr **Martin Pogoreutz**, presented the ground-breaking combination of production, conversion, storage and consumption of different energy carriers in the [Energy Hub](#).

The concept was presented in Brussels during the **Road Ahead** event with 100 participants. The event was the occasion to say goodbye to the European Power Plant Suppliers Association (EPPSA) and to welcome **Energy Technologies Europe**, the association representing suppliers of state-of-the-art thermal energy and energy conversion technologies.

Dr Pogoreutz explained how cutting edges technologies enable the future of the European energy sector and how the Energy Hub will accelerate the energy transition so that Europe can become carbon neutral well before 2050.

Director of Energy Policy in DG Energy, Ms **Megan Richards**, gave a keynote speech in which she welcomed the association's initiative and encouraged others to follow the same pathway. After that, a variety of stakeholders from the **European Commission**, the **European Climate Foundation** and **Eurelectric** joined our panel to provide the audience with their impressions and ideas.

"We are glad to see the positive reactions of stakeholders to the new association and the Energy Hub concept. We now look forward to the deployment of the Energy Hub and we are ready to cooperate with EU policy-makers for the benefit of a sustainable energy future" declared Mr **Patrick Clerens**, Secretary General of Energy Technologies Europe.

Energy Technologies Europe

Energy Technologies Europe represents suppliers of state-of-the-art thermal energy and energy conversion technologies.

Members are located throughout Europe and are engineering cutting edge technologies contributing to a clean, secure, and affordable energy supply. Energy Technologies Europe gives a voice at the EU level to suppliers of innovative technologies to produce electricity, heating and cooling as well as generating other products, utilising a multitude of energy sources.
